

The Spa Guy Inc Recommended Spa Chemical Application

The Spa Guy recommends Chlorine as your main ingredient in treating your Hot Tub.

Below you will find the 3 basic ingredients.

1. Weekly (6-8 Teaspoons) Chlorine Granules

Note: When testing Chlorine with the Test Strips they will show no Chlorine or less than

1 PPM. This is OK as long as your water is staying clear.

2. Weekly (As Indicated on Bottle) Stain & Scale Control

3. After Spa Use (2 Teaspoons) Non-Chlorine Shock

Throw in and start pump and shut lid.

After 1 week check your PH and Alkalinity with Test Strips and add 4. PH up or

5. PH down as Indicated. (Use only small doses and don't check and adjust this daily)

Foaming: This generally comes from too much Chemical in the water, The Air valves left open all the time or a combination of both. Also too much detergent in your clothes will cause this. You can add a Few Drops of 6. Foam Clear to the water and watch the foam go away.

The Idea of this formula is to use the least amount of chemical needed to get the job done nothing more nothing less and to keep the chemical smell down. Consistency is the answer. You must do the weekly items on the same day of the week. Inconsistency will not work with this formula.
